

**SYSTEM, METHOD, AND APPARATUS FOR PROVIDING HIGH-SPEED
ACCESS TO DATA STORED AT A DIGITAL CELLULAR SWITCH**

Abstract

5 A system, method, and apparatus for facilitating high-speed access to data files stored at a digital cellular switch is provided. A digital cellular switch is provided that is capable of receiving and processing communications via a digital control interface. An operations and maintenance platform processor is also provided that is capable of communicating with the digital cellular switch via the digital control interface. The
10 operations and maintenance platform processor includes software applications that allow a user to login to the operations and maintenance platform processor and execute commands. Once logged into the operations and maintenance platform processor, a user may execute application programs for transferring data files to and from the digital cellular switch over the digital control interface.
